June 14, 2026

Dear Selina Rummel,

I am applying for the Senior Data Analyst position in Oda's Shop Team. My background is in applied statistics and quantitative data science, and the core responsibilities of this role -- defining success metrics, analysing ambiguous problems with stakeholder input, and identifying flawed analytical assumptions -- are work I have done across two research and industry contexts.

What draws me to the Shop Team is Oda's investment in rigorous experimentation: over 100 trustworthy A/B tests completed in 2023 using a Bayesian framework, and a data-as-a-product philosophy that treats analytical outputs as first-class deliverables with quality standards. I want to work where analytical rigour directly shapes customer-facing decisions, not just informs them.

The skills that map most directly:

- Impact metrics & evaluation: Defined success metrics and statistical evaluation frameworks across a 4-year programme; improved output quality by ~40% by systematically identifying and correcting flawed model assumptions.
- Ambiguous problems with stakeholder input: Gathered domain expert input to frame ambiguous analytical problems and deliver coherent findings; produced risk assessments and recommendations for insurance and maritime clients.
- Python & SQL analytics: Core stack is Python (pandas, NumPy, scikit-learn, XGBoost) and SQL for data modelling and extraction; built and iterated on statistical models and evaluation pipelines in fast-moving project contexts.
- AI-integrated workflows: Use Claude Code actively as an analytical and development tool; comfortable working in AI-assisted, iterative environments where tooling evolves alongside the work.

I am available from early August. This is a fixed-term contract; I am well-suited to delivering impact quickly in that structure and would welcome the chance to discuss how my background fits the Shop Team's priorities.

Kind regards,

Ashbin Jaison
